

### **1. Busby: Can't seal Fukushima like Chernobyl - it all goes into sea Russia Today; Uploaded on 25 Apr 2011**

As world marks the Chernobyl anniversary, many say that the world has failed to learn the lessons on nuclear safety that the tragedy provided. RT talks to Professor Christopher Busby, Scientific secretary of the European Committee on radiation risks, for a little more insight on 21st century's most serious nuclear crisis at Fukushima.

### **2. Busby: Fukushima reactors a raging radioactive inferno**

**Russia Today; Uploaded on 17 May 2011**

There are signs that two further reactors at Japan's troubled Fukushima plant may have gone into meltdown. Similar problems were earlier confirmed at the number one reactor. Its operators are suspected of failing to properly cool them after the earthquake. RT gets some insight on this from Professor Christopher Busby, who's from the European Committee on Radiation Risks.

### **3. Chris Busby, RadChick, MsMilkytheclown Fukushima Nuclear interview (full)**

**Published on 6 Sep 2012**

Interview with Dr Christopher Busby from his home in Wales via Skype. We talk about many nuclear things all over the world.

STOP Nuclear Legally- Sign Petition: Dr Chris Busby (video where Chris Busby describes how YOU can help stop nuclear fallout by following these simple directions) link to petition here <http://nuclearjustice.org/wp-content/...> <http://nuclearjustice.org/?p=50>

It follows that if new evidence has appeared about the potential consequences of the EURATOM Basic Safety Directive, Under Article 20 (in the original 1996 version Article 6) all practices involving radiation exposure have to be re-justified. It is a legal requirement. What is proposed, therefore, is that all individuals resident in or citizens of a EU member state country, and all NGOs based in such countries, petition the European Parliament to require a re-justification of all radiation producing practices covered by the Euratom Basic Safety Standards Directive in any of its forms in the light of the new scientific evidence of health risks.

This new evidence is appended to the Petition as an Appendix and petitioners may ask for the evidence to be presented in any scientific discussion by members of the European

Committee on Radiation Risk [www.euradcom.org](http://www.euradcom.org) , or the International Committee on Nuclear Justice [www.nuclearjustice.org](http://www.nuclearjustice.org) .

\* ECRR-MODEL VS. ICRP

\*The existentiality of the lawfully acceptable amount of radio nuclides in the environment is the core question for all life on Earth. This question is scientifically formulated as the intellectual battle between two scientific models on the risk of the radioactivity, the acceptable levels of radio nuclides in the environment. The presently by the governments used ICRP-model, by the experts of this website is found guilty to be the cause of ongoing genocidal annihilation of all life forms as it underestimates the risks thousands of times. The ECRR-model is suggested to be used.

ECRR-model <http://www.euradcom.org>

Recommendations of the ECRR <http://www.euradcom.org/2011/ecrr2010...>

ICRP-model <http://www.icrp.org>

Analyses of the ICRP model <http://irpa11.irpa.net/pdfs/3a35.pdf>

Enjoy the scientific battle of both directors of the two Radiation Risk models -- J.Valentin and C. Busby, 22.03.2009, Stockholm The recently resigned Scientific Secretary of the ICRP, Dr Jack Valentin , concedes to Pr. Chris Busby (ECRR) that the ICRP model can not be used to predict the health effects of exposures and that for certain internal exposures it is insecure by up to two orders of magnitude. He also says that as he was no longer employed by ICRP he could agree that the ICRP and the United Nations committee on radiation protection (UNSCEAR) had been wrong in not examining the evidence from the Chernobyl accident and other evidence which shows large errors in the ICRP risk model.

#### 5. Prof.Chris Busby VERY IMPORTANT !Nuclear power and solar flares Published on 5 Mar 2012

I created this video with the YouTube Video Editor (<http://www.youtube.com/editor>) This video explains the dangers of nuclear reactors and solar flares. In the 1850's the earth was struck by a massive solar flare from the sun. Fortunately, the only power back then was telegraph lines, which were destroyed. After the catastrophe at Fukushima however, we learned the hard way, what happens to a nuclear reactor when there is a loss of power. If the earth was to take another hit as in the 1850's, the damage would be catastrophic to say the least. without power, every nuclear reactor on the planet would possibly have the same outcome as Fukushima. Needless to say, that would be the end of humanity, and all life on the planet. We can only pray that this doesn't happen. Nuclear power is the most dangerous form of energy ever created, we must abolish this life destroying form of energy at all costs. With all the talk from NASA, about the possibility of a massive solar flare hitting the earth, we are running out of time. Time to put an end to nuclear power, before it puts an end to the earth, and all living things on it.

## **6. Busby: 400,000 to develop cancer in 200 km radius of Fukushima Uploaded on 13 Apr 2011**

Engineers at Japan's Fukushima plant continue work on emptying highly radioactive water from one of the nuclear reactors. The latest tests show that radiation levels in the sea near the damaged facility have spiked. On Tuesday, Japan raised the level of nuclear alert at the plant to the maximum of seven, putting it on a par with the Chernobyl disaster. Recovery efforts came under threat as series of powerful aftershocks hit the area near the power station. It came a month after the massive earthquake and tsunami devastated the country, leaving over 13 thousand people dead. Monitoring stations around the world have been picking up small amounts of radioactive particles spreading from Fukushima.55394; <http://youtu.be/S0H-mtsdsagg>

## **9. Chris Busby: Nuclear Test Veterans betrayal**

Published on 19 Mar 2013

Prof Busby talks about the Test veterans radiation Pensions Appeals Tribunals cases. He explains how the veterans have been betrayed by their solicitors through a complex series of changes in the nature of the hearings and the sudden withdrawal of one solicitor firm Rosenblatts and its curious replacement by another, Hogan Lovells, culminating in the removal of all the critical evidence from the cases and the exclusion of Busby's evidence collected over three years, without the knowledge of the individual litigants. Prof Busby explains how secret documents, released under Freedom of Information requests and Directions by the Judge, Hugh Stubbs, point to Uranium, the main component of the bombs, as the major cause of the health effects in the veterans and their children and grandchildren. He has decided to put all the information from his many reports, including information obtained from redacted secret sources, on the internet. This information was excluded by the new solicitors to the case, (Hogan Lovells International), which was held in February 2013. Reports will be placed on the internet on the sites: [www.llrc.org](http://www.llrc.org) and [www.greenaudit.org](http://www.greenaudit.org)

## **12 Dr Chris Busby at the Royal Society: Scientific Dishonesty**

**Uploaded on 7 Jan 2012**

Following up his 2007 book "Wolves of Water" Chris Busby calls for the development in Society of legal mechanisms to investigate issues of scientific dishonesty like those in Denmark. Such issues, he argues, can be seen in the same category as perjury in criminal court cases for which serious sanctions exist. The essay has been published in Iraq-Silent Death edited by Christian Scherrer (University Sains Press, Malaysia Oct 2011) and is also to be found, (together with several examples of possible scientific dishonesty) presented on the website of the Low Level Radiation Campaign [www.llrc.org](http://www.llrc.org) The matter is one of democracy and goes to the core of expert evidence on Policy to governments. It is argued that scientists (like those who talk down the Fukushima catastrophe) or those like Prof Wade Allison who advise people to move into radioactive areas because doses of up to 100mSv a month are harmless, should be investigated in a court or law and if found guilty of knowingly giving bad advice (rather than being stupid or careless) suffer penalties.

### **18 Pr Chris Busby on infertility risk around Fukushima, Japan, etc**

Uploaded on 13 Apr 2011

This is the final part. The first video:

<http://www.youtube.com/watch?v=PYgBgk...>

Pr Chris Busby is asked by BSRRW.org secretary Ditta Rietuma to inform the Austrian radio reporter on the infertility risk in Japan. Additional to at least 400.000 cancers in next 50 years in the 200 km radius from Fukushima, estimated using the more reliable ECRR-model ( [www.euradcom.org](http://www.euradcom.org) and [http://www.bsrrw.org/?page\\_id=83](http://www.bsrrw.org/?page_id=83) ) instead of the official ICRP model. Estimation is based even on the epidemiology method of Swedish researchers Martin Tondel etc ( <http://www.ncbi.nlm.nih.gov/pmc/artic...> ). Anyway it is clear underestimation as it is made on the unreliable IAEA data reports, that might be many times higher in reality. The risks on fertility and other disease are not estimated in this number. Busby describes Fukushima catastrophe as a global problem caused by systemic global encouragement on nuclear industry investments and US reactor sales. Busby's prediction for Europeans is relaxing regarding Fukushima fallout, so far. He alarms China, Korea etc areas. The IAEA official ICRP radiation risk model is incorrect by several orders of magnitude, ECRR model is to be used. [www.euradcom.org](http://www.euradcom.org) [www.bsrrw.org](http://www.bsrrw.org)

<http://www.infowars.net/>

<http://www.prisonplanet.com/>

Professor Chris Busby on the Alex Jones Show, April 12, 2011.

A British professor and expert on the health effects of ionizing radiation told Alex Jones today evidence points toward a nuclear explosion occurring at the Fukushima Daiichi complex. Two explosions at the plant in March were described as hydrogen gas explosions by Japanese officials and the corporate media.

Citing data collected by two Russian scientists, Professor Chris Busby told Alex Jones and his audience the explosions at Fukushima were nuclear. The Russian scientists,

Sergey A. Pakhomov and Yuri V. Dubasov of the VG Khlopin Radium Institute in Saint Petersburg, examined data related to the explosion at Chernobyl.

Japanese nuclear safety agency raises crisis level of Fukushima Daiichi power plant accident from 5 to 7.

Using ratios of the radionuclides Xenon 133 and Xenon 133m which they measured by gamma spectrometer, the Russians demonstrated that the Chernobyl explosion was a fission criticality explosion and not principally a hydrogen explosion as has been claimed.

"I believe that the explosion of the No 3 reactor may have also involved criticality but this must await the release of data on measurements of the Xenon isotope ratios," he writes in a statement on Fukushima and Chernobyl emailed to Infowars.com.

Busby further notes that the surface contamination and of dose rates 60 kilometers out from the Fukushima site on March 17 exceeded that released at Chernobyl.

He explains in his statement that the damaged reactors at Fukushima "are now continuing to fission. It is hoped that there will be no separation of plutonium and possible nuclear explosion. I feel that this is unlikely now." Short of an actual plutonium explosion, the reactors remain open to the air and will continue to "fission and release radionuclides for years unless something drastic is done."

Dr. Busby noted a precedent for the dire scenario now unfolding -- a nuclear explosion at a plutonium production reprocessing plant in the former Soviet Union in 1957.

The incident at the Mayak facility was the second-worst nuclear accident in history after the Chernobyl disaster. The explosion released 50-100 tonnes of high-level radioactive waste and contaminated a huge territory in the eastern Urals. The Soviets kept the explosion secret for 30 years. According to a report on the accident, about 400,000 people in the region were irradiated following the explosion and other incidents at the plant.

Dr. Busby told Alex Jones that short of actual isotope readings, he cannot definitely state that the explosions at Fukushima were nuclear, although he believes they were. "We don't have evidence of that," he concluded, "we would need to have the Xenon isotope ratios."

**24 Chris Busby: Contamination at Hinkley Point**

**Published on 17 Mar 2012**

A short presentation about enriched Uranium contamination at the Hinkley Point nuclear power station complex on the Somerset coast. This is an update on the arguments about the presence of higher than expected levels of Uranium on the site which began with a report by Green Audit at the end of 2010. The site is being developed by French company EdF energy for a new nuclear reactor. Dr Busby visited the site in January 2011 with Rosa Cato and measured higher gamma radiation dose rates than were reported to the Environment Agency in the site characterisation documents. Gamma dose rates were above 150nGy/h compared with measurements of 90nGy/h reported in the scientific literature at the perimeter fence in 1993 and less than 60nGy/h reported by EdF in the documents examined by the Environment Agency. These reported gamma radiation levels were clearly wrong and this should have been questioned. The high gamma dose rates measured by Chris Busby are predictable on the basis of the levels of Uranium reported for the site by EdF. In addition, a soil sample taken by Stop Hinkley from the site has been analysed using ICPMS in Germany and high resolution gamma spectrometry and both methods independently confirm the presence of slightly enriched Uranium. Overall Uranium concentrations are twice to four times greater than would be expected for the area on the basis of published Uranium maps. This supports the original 2011 report by Green Audit. Measurement of anomalous levels of Iodine in the soil sample by ICPMS show that contamination is transferred from the sea which opens up the issue of the high levels of cancer and infant mortality found by Green Audit in the downwind coastal town of Burnham on Sea. The new Green Audit report on this issue is at [www.llrc.org](http://www.llrc.org) 820; <http://youtu.be/F3BQFDg4gHg>

**25 Chris Busby- Einstein, Politics and Reality**  
**Published on 19 Mar 2012**

In this 3rd Marius lecture, Prof Busby addresses the dangers of allowing physics and physicists to influence political decisions through scientific advice to government. He explains that the process of surrendering philosophical descriptions of the Universe to the physicists began with the dislocation caused in Natural Philosophy through the acceptance of Einstein's Special Theory of Relativity in the early 20th Century. The constraints placed on the dimensions of reality which this produced enabled physicists to achieve a unique position as a class of individuals who could maintain anything, however impossible, on the basis of mathematical reductionism, and no-one could argue about this without being attacked for being stupid: a classical Emperor's New Clothes situation. Busby presents two Proofs which show Einstein's Postulates to be incorrect and he thereby re-instates the luminiferous aether of Maxwell/Lorentz, which was anyway shown to exist through the precise interferometer experiments of Miller in the 1920s. But most important is the danger which is implicit in all this. Busby warns that Relativity is a political issue and that almost all scientific advisors to government are physicists who have steered policy in the last 50 years towards several science assisted collisions with

reality, and the deaths of millions of people. The time has come to topple them from the pedestal erected by Einstein and to take back control of policy decisions.

### **29 Chris Busby at the United Nations Geneva: US Marshall Islands Atomic tests Published on 2 Jan 2013**

The US carried out their main Atmospheric Megaton Hydrogen (thermonuclear) Bomb Tests in the Pacific Test grounds centred on the Marshall Islands between 1950 and 1958 after the discovery that their atomic tests in the Nevada desert and in New Mexico were causing fallout contamination as far away as New York. The largest hydrogen bomb destroyed Bikini atoll. Fallout in the Marshall Islands resulted in serious health effects which have been systematically either ignored or covered up. The question of the magnitude of these effects has come to the UN Human Rights Council in Geneva and a Special Rapporteur was charged with investigating the issue and producing a report for the September meeting of the UNHRC in Geneva. The US Health Physics Society had previously produced a biased and dishonest report arguing that fallout was too low and doses too low to have caused any effects. This video is of the first half of the UNHRC meeting in Geneva on September 13th 2012 organised by the American Association of Anthropologists. The meeting Chair is Prof Barbara Rose Johnston and presentations were made by Prof Holly Barker and Prof Chris Busby. Delegates from the Marshall Islands also attended and made contributions. Dr Busby's presentation is uploaded in a separate video and his report to the UNHRC is at [www.nuclearjustice.org](http://www.nuclearjustice.org) and his paper on the effects is at [http://www.greenaudit.org/?page\\_id=104](http://www.greenaudit.org/?page_id=104) The main recommendations of Dr Busby's reports were adopted by the UN Special Rapporteur in his report to the General Assembly, most important being that a proper independent (of the US and the Health Physics Society) investigation of the contamination and the ill health are carried out. Busby's report is:

The health effects of exposures to radioactivity from the US Pacific nuclear tests in the Marshall is. Criticisms of the analysis of Simon et al 2010 radiation doses and cancer risks in the Marshall islands associated with exposure to radioactive fallout from Bikini and Enewetak nuclear weapons tests and supporting documentation. Occasional paper 2012/6

[http://www.greenaudit.org/?page\\_id=104](http://www.greenaudit.org/?page_id=104)

### **30 Chris Busby at the UN: Marshall Islands US Atomic Tests Published on 1 Jan 2013**

Dr Chris Busby was invited to attend and participate in a session chaired by Dr. Barbara Rose Johnston (Senior Research Fellow at the Center for Political Ecology who attended the UN Human Rights Council meeting as a delegate of the American Anthropological Association). The session:

"Human rights in the Marshall Islands: environment and health" was co-sponsored by the International Women's Anthropology Conference, Physicians for Social Responsibility, Nuclear Age Peace Foundation, Womens International League for Peace and Freedom, Reaching Critical Will, Cultural Survival, and ERUB: Enewetak, Rongelap, Utrok & Bikini Atoll -- Nuclear Survivors."

The earlier part of the meeting will also be uploaded to youtube. The US nuclear tests created enormous contamination and serious health problems in the Marshall Islands but these have been systematically covered up. Most recently the US Health Physics Society published a dishonest series of reports maintaining that there were no serious health effects due to the radioactive fallout. Dr Busby's paper on the issue "The health effects of exposures to radioactivity from the us pacific nuclear tests in the Marshall is. Criticisms of the analysis of Simon et al 2010: Radiation doses and cancer risks in the Marshall islands associated with exposure to radioactive fallout from Bikini and Enewetak nuclear weapons tests and supporting documentation. Occasional paper 2012/6" is at the Green Audit website:

[http://www.greenaudit.org/?page\\_id=104](http://www.greenaudit.org/?page_id=104)

and at:

<http://www.scribd.com/doc/111935078/22>

His representation to the UNHCR on behalf of the AAA is at:<http://nuclearjustice.org/wp-content/...>

Dr Busby's main recommendations were adopted by the Special Rapporteur to the UNHCR in his report to the General Assembly. These were that there should be a fully independent study both of the remaining fallout in the Marshall Islands and also an independent Epidemiological study of the health of the inhabitants.

490; <http://youtu.be/HTUwdpnzY1U>

---

### **31 Dr Chris Busby: a plan to stop nuclear pollution Part 2 Published on 11 Aug 2012**

It is currently European Law that exposure to radioactivity in the environment is permitted and controlled by the EURATOM Basic Safety Standards Directive or BSS. This has a clause in it which states that "if new and important information about the efficacy of the provisions of the BSS emerge, all radiation exposure practices have to be re-examined (justified). Since the BSS was drafted in 1996 there has been a very large number of studies showing that the scientific basis of the BSS is totally unsafe, and many studies of populations show that millions have died and will die because of this. All inhabitants of European Union countries have the right under the EU law to petition the European Parliament. As a first strategy Dr Busby is asking everyone to download a Petition document from the website of [www.nuclearjustice.org](http://www.nuclearjustice.org), to sign it and post it in August, registered or signed for, to the Petitions Committee of the European Parliament, Rue Wiertz, Brussels, Belgium. All details are on the website and also a German, French and Spanish version are being prepared. This video is being put up here again as the search engines do not seem to be finding the original which was put up by radioactivebsr from Latvia. Something very fishy there.

**Published on 25 Jul 2012**

In this and Part 2 <http://youtu.be/oeS5dRkyBi0>

Dr Busby describes measurements made on an airconditioning unit filter from inside an apartment in central Tokyo. This was sent by a lady in Tokyo who wanted to know if it was safe to live there. The filter only collected air from inside the apartment. It shows the presence of 130000Bq/kg radioCaesium in the dust plus enriched Uranium and for the first time Lead-210/Polonium-210. The apartment was evacuated from the Tuesday after the catastrophe and the machine switched off; and the family returned 5 months later. This and much other information about the health effects and cover ups, including leaked data are to be found in Dr Busby's new book in Japanese: the Horror of Fukushima, published on 25th July by Kodansha in Tokyo

### **34 Chris Busby: the Forsmark nuclear waste Repository plan**

**Published on 12 Jun 2012**

The future of nuclear energy depends on the industry finding somewhere to put the high level waste. This is radioactive for millions of years and must be isolated from the environment. The hitherto intractable problem was apparently solved by the Swedish nuclear industry who proposed a plan to encapsulate it in copper canisters and bury it in tunnels 500m underneath the Baltic sea at Forsmark. The full environmental impact report was released last year; the government requirements are that the company SKB show that the waste will not emerge from the canisters between 100,000 years and 1 million years. After studying the report in detail it became clear that the design was flawed because it did not include consideration of the Helium gas produced from the alpha emitters. The volume of gas in each canister would cause it to explode long before 100,000 years resulting in the contamination of the Baltic Sea by the equivalent of 2000 Chernobyl accidents. Back to the drawing Board guys! Paper is at <http://www.bsrrw.org/wp-content/uploa...>

### **36 Chris Busby: EURATOM strategy to stop the nuclear industry**

**Published on 14 May 2012**

This is the second part or the presentation in Geneva May 11th by Dr Busby. He shows how the EURATOM law may be used to force a re-justification of all nuclear practices. The websites from which this will be administered are [www.bsrrw.org](http://www.bsrrw.org) and [www.llrc.org](http://www.llrc.org). The process will begin in the next month and your help is needed. Contact: [info@bsrrw.org](mailto:info@bsrrw.org) and copy to [bramhall@llrc.org](mailto:bramhall@llrc.org) with your name and email. Any citizen of the European Union or NGO in the EU can add their name and someone will be in touch. The video continues with other interesting contributions.

### **37 Chris Busby, Geneva, 2012: a plan to stop the nuclear industry**

Published on 14 May 2012

Philosophers have interpreted the world: the point is--to change it! Moving aside from science, a plan is revealed to use Human Rights laws and the EURATOM Basic Safety Standards Directive to call for a re-justification of all nuclear practices on the basis that

new evidence exists of the failure of the current radiation risk model (ICRP). The final project requires YOUR help, so watch these channels.

**38 Chris Busby, Geneva: Its much worse than you think**  
**Published on 14 May 2012**

Professor Busby at the microphone in Geneva : The radioactivity releases to the planet in the last 50 years, from global weapons fallout ,accidents (Chernobyl, Fukushima) and plain everyday releases from nuclear plants and reprocessing plants under licence are destroying the integrity of life on earth. Increases in all disease rates, increases in cancer, death of species, including humans with infertility, are accelerating. Very few real scientists are standing in the path of the greatest human planetary health scandal of history. Without funding, there is little hope, as the few scientists standing in the way of this destruction are increasingly unable to survive and are getting old. What is needed is funding of an independent institute to deal with this problem and call a halt to the continuous and increasing contamination of the planet. For those interested in helping, contact [bramhall@llrc.org](mailto:bramhall@llrc.org) or [admin@greenaudit.org](mailto:admin@greenaudit.org) for a discussion.

**40 Chris Busby and others at Hinkley Point Nuclear Power Station 10 March**  
**Published on 15 Mar 2012**

Big demonstration on 10th March outside Hinkley Point nuclear power station in Somerset to oppose the building of a new reactor by the French EdF Energy. Chris Busby talks about using International Human Rights and Environment laws to raise the issue of the requirement built into the EURATOM Basic Safety Standards Directive by the Greens in the European Parliament to force re-assessment of Justification for all practices involving public exposures to radiation if new and important scientific evidence appears. This begins with a simple demand to the Environment Minister of the Member State country and also a Petition to the European Parliament. Then if the Minister refuses to order a reassessment take the case to the European Courts. Watch out for template and instructions in the next few weeks on [www.bsrrw.org](http://www.bsrrw.org) and [www.llrc.org](http://www.llrc.org) . Rosa Cato on the camera.

**41 Dr Busby and Children with Cancer**  
**Published on 9 Mar 2012**

Chris Busby lays into the UK charity Children with Cancer, the largest childhood cancer charity in the UK, which he explains is standing in the way of finding the real causes of childhood cancer. He advises people to stop donating their money to an organisation that wastes it and which avoids looking at what is the obvious cause of childhood cancer, environmental exposure to radioactive contamination. This is clear from the recent studies of uranium particle exposure in Fallujah Iraq and a 14-fold increase in childhood cancer in that town. Nuclear sites, he argues, also run on uranium and release particulates, and are associated with childhood cancer. He accuses the conference committee of bias and draws attention to the astonishing choice of ex- nuclear industry British Nuclear Fuels (Sellafield) research chief, Richard Wakeford, (a man who has described himself as BNFLs Rottweiler) as the CWC plenary conference speaker on the relationship between ionizing radiation and childhood leukemia. He asks members of the public to write and complain to the charity commission and the trustees of the CWC .

#### **45 Busby: Fukushima 'criminal event' calls for investigation**

Russia Today

Uploaded on 27 Dec 2011

A newly released report on the Fukushima nuclear crisis says it was down to the plant's operators being ill-prepared and not responding properly to the earthquake and tsunami disaster. A major government inquiry said some engineers abandoned the plant as the trouble started and other staff delayed reporting significant radiation leaks. Professor Christopher Busby, scientific secretary to the European Committee on Radiation Risks, says health damage after contamination will be more serious than Japan announced.

## **46 Chris Busby, Nuclear Power and Cancer in North Wales near Wylfa Part 2**

**Uploaded on 22 Dec 2011**

Welsh Language ITV flagship programme Byd ar Bedwar (20/12/2011) investigates breast cancer increases downwind of the Wylfa Nuclear Power Station on Anglesey. Dr Chris Busby was commissioned by the programme to investigate cancer death rates in the 11 wards surrounding the plant. He found a significant 60% excess risk in women dying between 1999 and 2008 in the downwind wards compared with the distant wards. There was also two-fold excess lung cancer risk in men in Amlwch Port downwind of the plant. Busby had previously studied cancer near three other nuclear power stations, Hinkley Point in Somerset, Bradwell in Essex and Trawsfynydd in Wales. All three have statistically significant excess risk of breast cancer in those living near the contaminated areas. The Bradwell breast cancers were associated with living near the contaminated coastal sediment of the R Blackwater estuary. A joint CERRIE commissioned study between Busby, the nuclear industry (Richard Wakeford) and NRPB was shut down in 2004 by the committee chairman when it became apparent that Busby's figures were correct and those of the government's Small Area Health Statistics Unit incorrect. Latest figures for Burnham-on-Sea, downwind of the Hinkley Point plant show a continued excess breast cancer mortality, supporting the many earlier studies carried out by Busby's Green Audit. The Hinkley site is contaminated with enriched uranium. (See [www.llrc.org](http://www.llrc.org), [www.stophinkley.org](http://www.stophinkley.org), [www.greenaudit.org](http://www.greenaudit.org) and the CERRIE Minority Report.) Data supplied by the official Public Health Wales obtained under a Freedom of Information request by ITV show a significant child leukemia excess in the downwind wards for the period 1974-2008. Ex-nuclear industry chief scientist Richard Wakeford, who denied these links when working for BNFL Sellafield, was recently appointed to the government's COMARE committee who advise on radiation risk.

**51 Pr C. Busby: Fallujah health effects, new U weapons. Nov 2011**

**Uploaded on 23 Nov 2011**

Prof Chris Busby was invited to Stockholm on Nov 19th 2011 to present the results of the studies he made with his colleagues into the health effects in and contamination of Fallujah Iraq. He begins by showing a video of a small modern ground based missile that is capable of atomising a tank, and asks what kind of explosive warhead could have such power? The studies, carried out with Malak Hamdan, Samira Alaani, Eleonore Blaurock Busch and others showed unbelievable levels of cancer and congenital malformation which appeared after the 2004 US led attack of the city. Leukemia and other cancer increases were greater than those produced by Hiroshima. For the first time, Busby presents specific data on congenital malformations in Fallujah from a yet unpublished study. The cause of these effects was found by analysing the hair of the parents of the children with congenital malformations. It was Enriched Uranium which, Busby argues,

must be some component of a new type of weapon. He believes that this discovery is what is behind the recent global operation to destroy his scientific credibility, as this is a secret that was not meant to become public

### **52 Cancer Birth Defects, Depleted Uranium, 2012, Fallujah, Iraq, Europe Published on 1 Jun 2012**

Will take you to the full length film by Feurat Alani: A lost generation discussed here by Prof Busby, who is interviewed in the film. It is about the US military's use of depleted uranium and how it harms our war veterans, their families, as well as the local population.

Watch this film and realize that there is a big cover-up of the effects of these weapons and pressure has to be brought on the authorities and on the military to stop using these weapons and to investigate the whole issue, because I have to say that there is a large amount of uranium circulating in the atmosphere NOW. So it's not just a question of people in Fallujah. It's also a question of people in Iraq, and people in Europe, and people in the United States. [There exists] [t]he concentration of uranium in high volume air samplers at the Atomic Weapons Research Establishment in Aldermaston, Berkshire so we can monitor the levels of uranium in the atmosphere. And these levels have been just consistently rising ever since the first Gulf War.

I URGE YOU TO DOWNLOAD AND REUPLOAD THIS VIDEO BEFORE IT IS TAKEN DOWN AGAIN! People have the right to know The TRUTH!

### **54 Dr Chris Busby talks to Edgar about nuclear scientists and those who love the atom**

Uploaded on 16 Oct 2011

Chris Busby caught on camera in 2009 presenting the conclusions of his examination of nuclear scientists and those who believe in nuclear energy and the atom. Asked by Swiss film-maker Edgar Hagen about a proposed movie about nuclear waste, Chris makes the point that there is more behind the nuclear energy arguments than is immediately apparent. He peels back the layers one by one, and concludes that the nuclear issue represents a fundamental historical split in human nature, one that perhaps defines the present world but is an alarming error in its reductionism presented as objectivity. He concludes that blind belief in such reductionist science will lead inevitably to a science assisted collision with reality. This, as we now know, followed after this interview was made, at Fukushima.

Note: when he talks about Levi-Bruhl, he does, of course, mean Levi Strauss, slip of the tongue.

### **58 Pr. Chris Busby: ECRR-model for radioactivity risk protection**

**Uploaded on 10 Dec 2009**

Recent research has shown a failure in the radiation risk model of the International Commission on Radiological Protection (ICRP), which radiation risk agencies in all nations currently use to regulate public exposures. There is new theoretical and experimental evidence showing that the health effects of the element Uranium have been massively underestimated. Uranium is still contaminating the world following its use as a weapon and is the basis for the nuclear industry. In this video Prof. Chris Busby, ECRR Scientific Secretary, outlines the scientific background and the problems of changing regulatory practice.

If the generally lower levels of radioactivity in the sediments of the Irish sea have caused increases in cancer in coastal populations, we should expect a similar effect in the Baltic, where the levels of radioactivity are about ten times greater than the peak levels and perhaps 50 times the current levels on the coast of the Irish sea.

### **59 Pr Chris Busby on infertility risk around Fukushima, Japan, etc Uploaded on 13 Apr 2011**

This is the final part. The first video:

<http://www.youtube.com/watch?v=PYgBgk...>

Pr Chris Busby is asked by BSRRW.org secretary Ditta Rietuma to inform the Austrian radio reporter on the infertility risk in Japan. Additional to at least 400.000 cancers in next 50 years in the 200 km radius from Fukushima, estimated using the more reliable ECRR-model ( [www.euradcom.org](http://www.euradcom.org) and [http://www.bsrrw.org/?page\\_id=83](http://www.bsrrw.org/?page_id=83) ) instead of the official ICRP model. Estimation is based even on the epidemiology method of Swedish researchers Martin Tondel etc (<http://www.ncbi.nlm.nih.gov/pmc/artic...> ). Anyway it is clear underestimation as it is made on the unreliable IAEA data reports, that might be many times higher in reality. The risks on fertility and other disease are not estimated in this number.

Busby describes Fukushima catastrophe as a global problem caused by systemic global encouragement on nuclear industry investments and US reactor sales.

Busby's prediction for Europeans is relaxing regarding Fukushima fallout, so far. He alarms China, Korea etc areas.

The IAEA official ICRP radiation risk model is incorrect by several orders of magnitude, ECRR model is to be used.

**68 Chris Busby: the Horror of Fukushima**  
**Published on 25 Jul 2012**

Chris Busby introduces a new Japanese language book published today in which he presents the truth about the health effects of the Fukushima Catastrophe to the Japanese people. In this book is much new information about the cover-ups including leaked

documents showing the the US knew from the very beginning that the radioactivity had reached Tokyo as they were measuring it on their Embassy roof. However no-one was informed. Also in the book is evidence that the F3 reactor explosion was a nuclear criticality. The book describes evidence from leaked measurements of samples from Tokyo and nearer to Fukushima and presents the predictions of the risk model of the European Committee on Radiation Risk for cancer increases in specific areas of Tokyo and other contaminated areas. The book discusses evidence from many measurements made by Chris Busby and laboratories commissioned by Green Audit on vehicle air filters, soil and water samples. The effects on the sea, particularly the dangers of sea to land transfer and of living near the sea are presented. The video ends with reference to new results of measurements made on an air conditioner filter from an apartment in central Tokyo showing dust inside the apartment on the 20th floor near the Tokyo tower had 130,000Bq/kg of Radioactive Caesium.
